

The MLOps platform built for the real world. Not the cloud.

Deploy, monitor, and heal ML models on Jetson boards, Raspberry Pis, and custom ARM hardware — even when the internet is gone.

RAISING

\$500K–\$1M

Pre-seed · SAFE or convertible note

hello@mlops.dev · Bengaluru, India

01 THE PROBLEM

Standard CI/CD tools assume reliable network access.

Edge devices — Jetson boards, industrial cameras, medical imaging hardware — go offline for hours.

Models drift. Updates fail silently. Engineers SSH into 40 cameras at 2am to roll back.

The factory floor, the hospital, the retail shelf: these are not data centres.

SILENT DRIFT

OFFLINE FAILURES

NO ROLLBACK

02 THE SOLUTION

Offline-first sync

6h outage tested. Zero data loss.

KL drift detection

On-device. Under 2ms on Cortex-A57.

Canary deployments

By hardware class. Health-gated.

7.4MB agent binary

One curl command. Any Linux ARM.

Open-source agent

Apache 2.0. Audit every line.

Fleet dashboard

Live SSE. JWT auth. Full API.

03 TRACTION

<8MB

Agent binary

99.7%

Sync uptime

<90s

Deploy latency

6h+

Offline tested

50+ engineers on waitlist · 6 devices in beta · Manufacturing, medical, retail verticals

12-page marketing site live at www.mlops.dev · Open-source agent at GitHub

Industries: factory floor (800-camera pilots), medical SaMD, retail shelf cameras at scale

04 MARKET

\$4.6B

Global MLOps market 2024

34% CAGR

Projected through 2030

\$1.1B

Edge AI software sub-segment

Underserved

No dominant edge MLOps player

05 BUSINESS MODEL

Free

Starter

Up to 10 devices

Open-source agent

Community support

\$499/mo

Team

Up to 500 devices

Drift detection + alerts

Email support 24h SLA

Custom

Enterprise

Unlimited devices

On-premise control plane

FDA/ISO compliance

06 FOUNDER

Raghunathareddy GR

CEO & FOUNDER · MLOPS.DEV

Built the first version of the edge agent after watching a factory lose 3 weeks to silent model drift. Background in ML infrastructure and systems engineering. Based in Bengaluru, India. Direct domain expertise: the problem is one I have personally experienced and built a solution for.

hello@mlops.dev · github.com/Raghunath2604 · www.mlops.dev · Bengaluru, India

07 WHY NOW

- Edge AI hardware is mainstream**
Jetson Orin starts at \$499. Raspberry Pi 5 is \$80. The hardware is now cheap enough that companies are deploying ML at scale to edge devices — but the tooling has not caught up.
- MLOps matured for the cloud, not the edge**
MLflow, W&B, Kubeflow — all assume reliable network, homogeneous compute, and cloud-native deployment. None of them work offline. That is the gap we fill.
- Regulation is creating urgency**
FDA SaMD requirements, ISO 42001, and EU AI Act compliance are forcing medical and industrial companies to solve exactly the audit trail and change control problems MLOps.dev addresses.

08 USE OF FUNDS (\$500K-\$1M)

Engineering (45%) · \$225K-\$450K
2 senior engineers: edge agent Go dev + ML infra.

Go-to-Market (25%) · \$125K-\$250K
PH launch, content, 3 design partner pilots.

Infrastructure (20%) · \$100K-\$200K
Control plane hosting, CDN, observability stack.

Operations (10%) · \$50K-\$100K
Legal (IP filing), admin, Bengaluru office.

09 COMPETITIVE LANDSCAPE

	OFFLINE-FIRST	EDGE DRIFT DETECT	ARM CANARY	<10MB AGENT	OPEN-SOURCE
MLOps.dev	✓	✓	✓	✓	✓
MLflow	✗	✗	✗	✗	✓
Kubeflow	✗	✗	✗	✗	✓
BentoML	✗	✗	✗	✗	✓
AWS SageMaker	✗	✗	✗	✗	✗

Pre-seed raise · \$500K-\$1M · SAFE or convertible note

18-month runway · Hire 2 engineers · 10 paying design partners · \$250K ARR target
